

AMENDMENTS TO THE SPECIFICATION

In the Specification:

Please amend the paragraph of the specification on page 21, lines 11-27 to change the reference numeral "19" therein to read --18--. A complete copy of that paragraph including marked-up language to show the changes made in that paragraph in this Amendment appears below.

Referring to Figure 3, the film 10 is folded over, as shown, to form the fold structure 11 and a zipper assembly 20 is inserted. Weakened areas 12 are preferably positioned below the zipper structure 20a so that when fold structure or hood 11 is removed the zipper structure 20a is exposed sufficiently above the resulting fin structures ~~19~~ 18 to allow the user access to the zipper structure 20a. Zipper skirts 16 are shown bonded to the film 10. However, it is presently believed preferable, prior to insertion of the zipper assembly 20, that the uncut ends 23 (see Figure 5) of each zipper assembly 20 be punched out or cut to form a radiused notch 22a, as shown in Figure 7. The cut zipper assembly ends 22 are sealed together (the sealed mass 22b of Figure 7) which will later function to retain the contents of the bag 100 such as food.
